# CHAPTER 1

---

rewardifycli

---

CLI interface for rewardify package

- Free software: BSD license
- Documentation: <https://rewardifycli.readthedocs.io>.

## 1.1 Features

- TODO

## 1.2 Credits

This package was created with [Cookiecutter](#) and the [audreyr/cookiecutter-pypackage](#) project template.

### 2.1 Stable release

To install rewardifycli, run this command in your terminal:

```
$ pip install rewardifycli
```

This is the preferred method to install rewardifycli, as it will always install the most recent stable release.

If you don't have [pip](#) installed, this [Python installation guide](#) can guide you through the process.

### 2.2 From sources

The sources for rewardifycli can be downloaded from the [Github repo](#).

You can either clone the public repository:

```
$ git clone git://github.com/thel6thpythonist/rewardifycli
```

Or download the [tarball](#):

```
$ curl -OL https://github.com/thel6thpythonist/rewardifycli/tarball/master
```

Once you have a copy of the source, you can install it with:

```
$ python setup.py install
```

## CHAPTER 3

---

### Usage

---

To use rewardifycli in a project:

```
import rewardifycli
```

Contributions are welcome, and they are greatly appreciated! Every little bit helps, and credit will always be given. You can contribute in many ways:

## 4.1 Types of Contributions

### 4.1.1 Report Bugs

Report bugs at <https://github.com/the16thpythonist/rewardifycli/issues>.

If you are reporting a bug, please include:

- Your operating system name and version.
- Any details about your local setup that might be helpful in troubleshooting.
- Detailed steps to reproduce the bug.

### 4.1.2 Fix Bugs

Look through the GitHub issues for bugs. Anything tagged with “bug” and “help wanted” is open to whoever wants to implement it.

### 4.1.3 Implement Features

Look through the GitHub issues for features. Anything tagged with “enhancement” and “help wanted” is open to whoever wants to implement it.

### 4.1.4 Write Documentation

rewardifycli could always use more documentation, whether as part of the official rewardifycli docs, in docstrings, or even on the web in blog posts, articles, and such.

### 4.1.5 Submit Feedback

The best way to send feedback is to file an issue at <https://github.com/the16thpythonist/rewardifycli/issues>.

If you are proposing a feature:

- Explain in detail how it would work.
- Keep the scope as narrow as possible, to make it easier to implement.
- Remember that this is a volunteer-driven project, and that contributions are welcome :)

## 4.2 Get Started!

Ready to contribute? Here's how to set up *rewardifycli* for local development.

1. Fork the *rewardifycli* repo on GitHub.
2. Clone your fork locally:

```
$ git clone git@github.com:your_name_here/rewardifycli.git
```

3. Install your local copy into a virtualenv. Assuming you have virtualenvwrapper installed, this is how you set up your fork for local development:

```
$ mkvirtualenv rewardifycli
$ cd rewardifycli/
$ python setup.py develop
```

4. Create a branch for local development:

```
$ git checkout -b name-of-your-bugfix-or-feature
```

Now you can make your changes locally.

5. When you're done making changes, check that your changes pass flake8 and the tests, including testing other Python versions with tox:

```
$ flake8 rewardifycli tests
$ python setup.py test or py.test
$ tox
```

To get flake8 and tox, just pip install them into your virtualenv.

6. Commit your changes and push your branch to GitHub:

```
$ git add .
$ git commit -m "Your detailed description of your changes."
$ git push origin name-of-your-bugfix-or-feature
```

7. Submit a pull request through the GitHub website.

## 4.3 Pull Request Guidelines

Before you submit a pull request, check that it meets these guidelines:

1. The pull request should include tests.
2. If the pull request adds functionality, the docs should be updated. Put your new functionality into a function with a docstring, and add the feature to the list in README.rst.
3. The pull request should work for Python 2.7, 3.4, 3.5 and 3.6, and for PyPy. Check [https://travis-ci.org/the16thpythonist/rewardifycli/pull\\_requests](https://travis-ci.org/the16thpythonist/rewardifycli/pull_requests) and make sure that the tests pass for all supported Python versions.

## 4.4 Tips

To run a subset of tests:

```
$ py.test tests.test_rewardifycli
```

## 4.5 Deploying

A reminder for the maintainers on how to deploy. Make sure all your changes are committed (including an entry in HISTORY.rst). Then run:

```
$ bumpversion patch # possible: major / minor / patch
$ git push
$ git push --tags
```

Travis will then deploy to PyPI if tests pass.

### 5.1 0.0.0.0 (2019-06-14)

- First release on PyPI.

### 5.2 0.0.1 (2019-06-16)

- Initial test version

### 5.3 0.0.2 (2019-06-16)

- Fixed the bug of the “\_\_internal” package not being included in the pypi release

### 5.4 0.0.3 (2019-06-16)

- Fixed the “run” command not being associated with the “install” command group

### 5.5 0.0.5 (2019-06-2019)

- Added the environment config initialization (also connection to the database) to the start of every command.

### 5.6 0.0.6 (2019-06-2019)

- Added the “login” command to the main command group, as it was previously missing

## 5.7 0.0.7 (2019-06-2019)

- Added the “update” command to the main command group

## 5.8 0.1.0 (2019-06-2019)

- First usable version
- Updated the templates to be a bit prettier

## CHAPTER 6

---

### Indices and tables

---

- `genindex`
- `modindex`
- `search`
